Alternate Reality Health Gaming
An iPhone Game Engine & An Intelligent Web Based Authoring Tool

Mark Riedl, Chinmay Barve, Sanjeet Hajarnis
School of Interactive Computing, Georgia Institute of Technology

Concept

Have fun and stay fit
Computer games should require players to go out in the real world.

Implementation

Location Based Games using Mobile Devices with GPS

Problem

A new game needs to be made for every location

Solution

If a Story is written for Location ‘A’, we can reuse it for Location ‘B’ by finding similar locations in the neighborhood of B which are at approximately the same relative distances.

Of course, it’s not easy.
